=

TOTAL
CONFIDENCE

When you purchase
a CODMAN[®]

Programmable Valve

with a CODMAN[®] BACTISEAL[®] Antimicrobial Impregnated Catheter System and any
part of the system requires revision, for any reason within one year of purchase,

CODMAN will replace those components
free of charge. No questions asked.

We are so confident that our system (CHPV & BACTISEAL) is the best treatment for hydrocephalus, that we are willing to offer this pledge to you for a year. With the advent of the CODMAN[®] Programmable Valve System, neurosurgeons can preselect one of 18 different pressure settings which can be adjusted non-invasively to adapt to changes in patient condition. Combine this with BACTISEAL[™] Antimicrobial Impregnated Catheter System, which creates a unique and effective barrier to bacterial colonization on all catheter surfaces, and you have a winning combination.
